## EDUCATION

**MCA (Aligarh Muslim University)**

2024-2026

CGPA - 7.91

**Bsc(Hons) Computer Application (Aligarh Muslim University)**

2021-2024

CGPA - 7.2

## EXPERIENCE

**AI Developer Intern** (Tata Institute Of Social Sciences)

Jan 2024 - Jun 2024

- Developed and implemented AI-driven models to analyze micro-urban climate data and assess potential impacts on human health outcomes.
- Designed and executed end-to-end data pipelines including data collection, cleaning, preprocessing, and feature engineering.
- Performed exploratory and statistical data analysis to uncover spatial and temporal patterns in urban climate variables.

## PROJECTS

### 1) AI Devops Agent - Automated Incident Analysis & Fix PR Generator

*Tech Stack: ReactJs, FastApi, LanGraph, Docker-Compose, PostgreSQL*

[Live Demo](#) | [Github Link](#)

- Developed an AI-powered DevOps agent that analyzes application crash logs, identifies root causes, and generates code fixes automatically.
- Designed an end-to-end workflow that updates source code and opens pull requests without manual intervention.
- Developed a user-facing dashboard to trigger automated incident analysis and track generated fixes and pull requests.
- Implemented logic to extract failing methods from stack traces and apply targeted code modifications.

### 2) MindColisium - A Multi-Agent Debate Arena

*Tech Stack: React.js, Tailwind CSS, FastApi, LanGraph, PostgreSQL, Docker-Compose*

[Live Demo](#) | [Github Link](#)

- Built an AI debate system using LangGraph with Pro, Con, Judge, and Summary agents for structured discussions.
- Enabled real-time streaming with FastAPI and SSE for instant responses.
- Developed a synced text-to-speech pipeline for matching audio and text.
- Designed agent personas and scoring logic for fair evaluation and clear summaries.

### 3) Knowledge Base - A Corrective RAG pipeline

*Tech Stack: React Js, Tailwind CSS, FastApi, LanGraph, Quadrant DB, Docker-Compose*

[Github Link](#)

- Built an end-to-end retrieval platform automating document ingestion and querying for rapid deployment and high availability.
- Developed an autonomous pipeline that grades retrieved data, filtering out noise to guarantee highly relevant context for answer generation.
- Implemented dynamic routing to fetch external web data when internal documents fall short, expanding independent question-answering capabilities.
- Created automated verification layers that evaluate generated responses against source material, eliminating AI hallucinations and ensuring factual accuracy.

## SKILLS

**Programming Languages:** C++, Java, Python, JavaScript

**Generative AI Framework :** LangChain, LanGraph

**Frontend Frameworks:** HTML, CSS, TailwindCSS, React JS, Next JS

**Backend Framework :** FastAPI, Spring Boot,

**Database Management:** MySQL, PostgreSQL, MongoDB

## CERTIFICATIONS

**Supervised Machine Learning Regression and Classification** (Coursera)

**Advanced Learning Algorithm** (Coursera)

**Unsupervised Learning Recommender and Reinforcement Learning** (Coursera)
